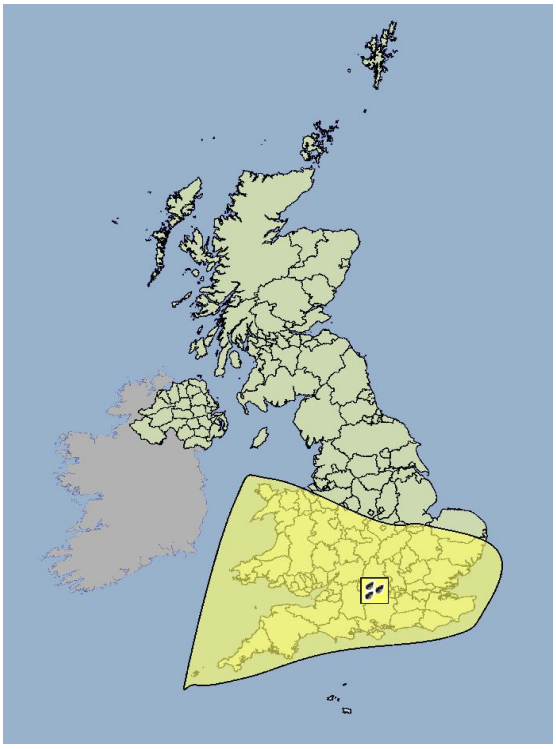
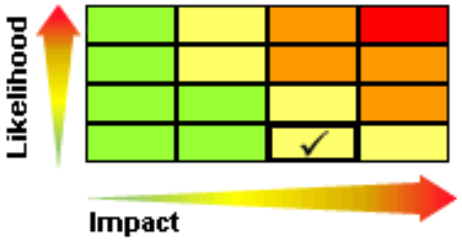
National Severe Weather Warning Service





Chief Forecasters Assessment
Southwest England looks like it will be first to see scattered thunderstorms, the threat then expanding northeastwards through the course of the evening.

There is relatively low confidence in the areas more at risk of intense downpours. Some places will miss them altogether but where they do occur, there is the potential for locally 20 to 30 mm of rain within an hour. This may result in surface water flooding, particularly should these amounts fall across urban areas.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **16:00 on Tue, 18th Jul 2017** until **23:55 on Tue, 18th Jul 2017**

Thundery showers are expected to push north across southern parts of the UK through Tuesday evening.

Although many places won't see these showers, there is a chance of localised flooding of homes, businesses and susceptible roads. Frequent lightning may be an additional hazard with possible disruption to power networks. Similarly, but very locally, hail may cause impacts.
